

High density power conversion

Increase flight time and  
functionality with highly  
efficient power delivery

**VICOR**

# High performance power modules optimized for 48V power delivery

## Kilowatts of power in a small space

Vicor high performance power modules require dramatically less space than traditional discrete power solutions while providing high efficiency and power density, whether going from HV to SELV or SELV to PoL. This enables increased run time and productivity without sacrificing navigation, sensing and safety features.

## Improved thermal management

Vicor high-efficiency and thermally adept power modules significantly reduce the heat generated and effectively remove it from the UAV, increasing its reliability and agility without taking up additional space or adding weight.

## Advanced power architectures

By adopting the modular approach power modules can be paralleled or swapped, allowing designs to accommodate new loads or changes in power. Easily scale power to meet increasing requirements in UAV systems, while allowing the same power architecture to be deployed across diverse UAV platforms.

## Quickly implement a power solution

Vicor provides tested and qualified power modules to build power delivery networks that can be designed quickly without all the wasted time and effort to test and certify a new discrete design. This enables our customers to get to market faster, giving them a distinct advantage over their competition.

## Benefits of Vicor modules

Low height

Scalable to  
higher power

High density  
and efficiency

Lightweight

# The 48V power delivery network

## Converting 800V or 400V to 48V

For UAVs powered by high voltage batteries Vicor high-density BCM fixed-ratio, isolated converters safely convert a high-voltage input into standard SELV output to power a 48V bus. BCM power modules are the most efficiently way to convert high voltage to SELV voltages.

## Converting non-SELV batteries to 48V

For UAVs powered by lower voltage batteries such as 100V, Vicor DCM power modules provide regulated 24 or 48V (as shown) distribution from the battery for payloads and downstream converters. The Vicor DCM is a highly efficient, DC-DC converter operating from an wide input range to generate an isolated output.

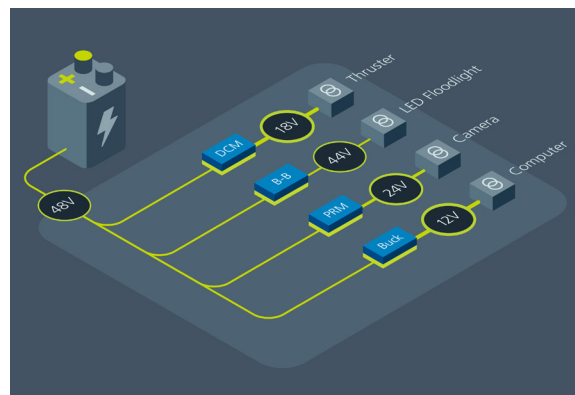

## Converting a high-voltage tether to 48V

On board a remote operated vehicle, Vicor BCM power modules isolate and step-down the high voltage from the tether to a 48V SELV. The compact, lightweight BCM reduces the size and weight of the UAV, as well as to dramatically reduce the diameter and weight of the tether itself to reduce weight, size and drag.

# Powering loads on the 48V bus

Once a 48V bus is established – from either a 48V battery or a higher voltage source converted to 48V – Vicor power modules at the point-of-load deliver high performance with the smallest footprint. The Vicor DCM is an isolated, regulated DC-DC converter that provides superior power density. The non-isolated Vicor ZVS buck and buck-boost regulators provide an efficient, lightweight and compact solution for supporting a wide range of loads from 2.2V to 54V. When high power is required, the PRM 48V to 48V voltage regulator has an extremely wide output range to conform to point-of-load requirements.

# Products used in robotics power delivery networks

## BCM bus converter modules

Isolated fixed-ratio

Input: 800 – 48V

Output: 2.4 – 55.0V

Current: Up to 150A

Efficiency: Up to 98%

As small as 22.0 x 16.5 x 6.7mm

[vicorpower.com/bcm](http://vicorpower.com/bcm)

## DCM DC-DC converters

Isolated regulated

Input: 9 – 420V

Output: 3.3, 5, 12, 13.8, 15, 24, 28, 36, 48V

Power: Up to 1300W

Efficiency: Up to 96%

As small as 24.8 x 22.8 x 7.21mm

[vicorpower.com/dcm](http://vicorpower.com/dcm)

## PRM pre- and post-transformation regulators

Non-isolated regulated

Input: 48V (36 – 75V)

Output: 48V (5 – 55V)

Power: Up to 600W

Efficiency: Up to 97%

As small as 22.0 x 16.5 x 6.73mm

[vicorpower.com/prm](http://vicorpower.com/prm)

## ZVS Buck regulator

Non-isolated regulated

Inputs: 12V (8 – 18V), 24V (8 – 42V), 48V (30 – 60V)

Output: 2.2 – 16V

Current: Up to 22A

Peak efficiency: Up to 98%

As small as 10.0 x 10.0 x 2.56mm

[vicorpower.com/buck](http://vicorpower.com/buck)

## ZVS buck-boost regulators

Non-isolated regulated

Input: 8 – 60V

Output: 10 – 54V

Power: Up to 150W continuous

Efficiency: Over 98%

10.5 x 14.5 x 3.05mm

Just enter a few specs to design your next power system

Designing your power system in a single location — up to 75% faster than traditional methods — is as easy as entering your input and output power as well as your basic system requirements. The Power System Designer is one of the Vicor web-based tools that makes it easy for you to build flexible, efficient and cost-effective power systems that get you to market faster.

- Instant performance analysis for recommended solutions
- Access an infinite number of products and technical specs
- Evaluate power chains electrically and mechanically
- Prioritize solutions by efficiency, component count, cost, footprint and recommended best fit
- Save, export and share a final BOM or power system
