|  |  | nd Report |  | Revised: | 2012-10- |

DESCRIPTION

PRODUCT COVERED:
USR, CNR: Component - Power supply modules, $2^{\text {nd }}$ Generation; Maxi, Mini, and Micro, Models Viiisxxyzzzw. Refer to Ills. 1, 1A, 1B, 1C, 3 and 4, 5, 6.

GENERAL CHARACTER AND USE:

* This product is a switching type power supply incorporating semiconductor components in the primary circuit. It is provided with input and output terminals for connection to the end use equipment. The power supply has been investigated to the Standard for Information Technology Equipment-Safety-Part 1: General Requirements, CAN/CSA C22.2 No. 60950-1 2 $^{\text {nd }}$ Edition, Amd. 1, 2011-12-19, , UL 60950-1, 2nd Edition, 2011-12-19 and UL1012, Standard for Power Supplies.

NOMENCLATURE BREAKDOWN:

Model number coding breakdown is specified in Ills. 1, 1A, 1B, 1C, 3, and 4, 5, 6. ELECTRICAL RATINGS:

Input - Input voltage and power are given by position 'i' in the Model number respectively, as indicated in nomenclature breakdown.

Output - Output voltage and power are given by positions $x$ and $z$ in Model number respectively, as indicated in nomenclature breakdown.

ENGINEERING CONSIDERATIONS (NOT FOR UL REPRESENTATIVE USE):

For use only in or with equipment where the acceptability of the combination is determined by Underwriters Laboratories Inc.

Conditions of Acceptability - When installed in the end-use equipment, the following are among the considerations to be made.
*1. These components have been judged on the basis of the required spacing in the Standard for Information Technology Equipment Equipment-Safety-Part 1: General
Requirements, CAN/CSA C22.2 No. 60950-1 $2^{\text {nd }}$ Edition, Amd. 1, 2011-12-19, UL 60950-1, 2nd Edition, Amd. 1, 2011-12-19 and Fifth Edition of Power Supplies, UL-1012.
2. The power supply should be installed in compliance with the enclosure, mounting, spacing, casualty, and segregation requirements of the ultimate application.
3. The baseplate temperature should be measured in the end product. The $100^{\circ} \mathrm{C}$ temperature should not be exceeded.
4. Secondary circuits have not been investigated for secondary interconnection. Should outputs be connected in series or parallel in end-use applications, additional evaluation will be necessary for increased levels of voltage or current/power.
5. The unit should be located within an overall enclosure so that uninsulated current carrying parts are suitably enclosed.
6. The input and output terminals are not acceptable for field connections and are only intended for connection to mating connectors of internal wiring inside the end-use machine. The acceptability of these and the mating connectors relative to secureness, insulating materials, and temperature should be considered.
7. Leakage current measurements should be performed in the end use application.
8. When baseplate is accessible, ground baseplate to earth/chassis ground in endproduct.
9. All units must have an external fuse provided in the end use application. See Table 1 for ratings.
10. Secondary Outputs 2V-48V comply with SELV requirements. Secondary 52V-95V are NonSELV outputs.

Special Considerations - The following items are considerations that were used when evaluating this product.

* The equipment is:

USR/CNR, indicates investigation to the U.S. and Canadian (Bi-National) Standard for Information Technology Equipment Equipment-Safety-Part 1: General Requirements, CAN/CSA C22.2 No. 60950-1 $2^{\text {nd }}$ Edition, Amd. 1, 2011-12-19, UL 60950-1, 2nd Edition, 2011-12-19
